Implementing Oracle Database Auditing

Objectives

After completing this lesson, you should be able to:

- Describe DBA responsibilities for security and auditing
- Enable standard database auditing
- Specify audit options
- Review audit information
- Maintain the audit trail

ORACLE

Separation of Responsibilities

- Users with DBA privileges must be trusted.
    - Abuse of trust
    - Audit trails protecting the trusted position
- DBA responsibilities must be shared.
- Accounts must never be shared.
- The DBA and the system administrator must be different people.
- Separate operator and DBA responsibilities.

ORACLE

Database Security

A secure system ensures the confidentiality of the data that it contains. There are several aspects of security:

- Restricting access to data and services
- Authenticating users
- Monitoring for suspicious activity
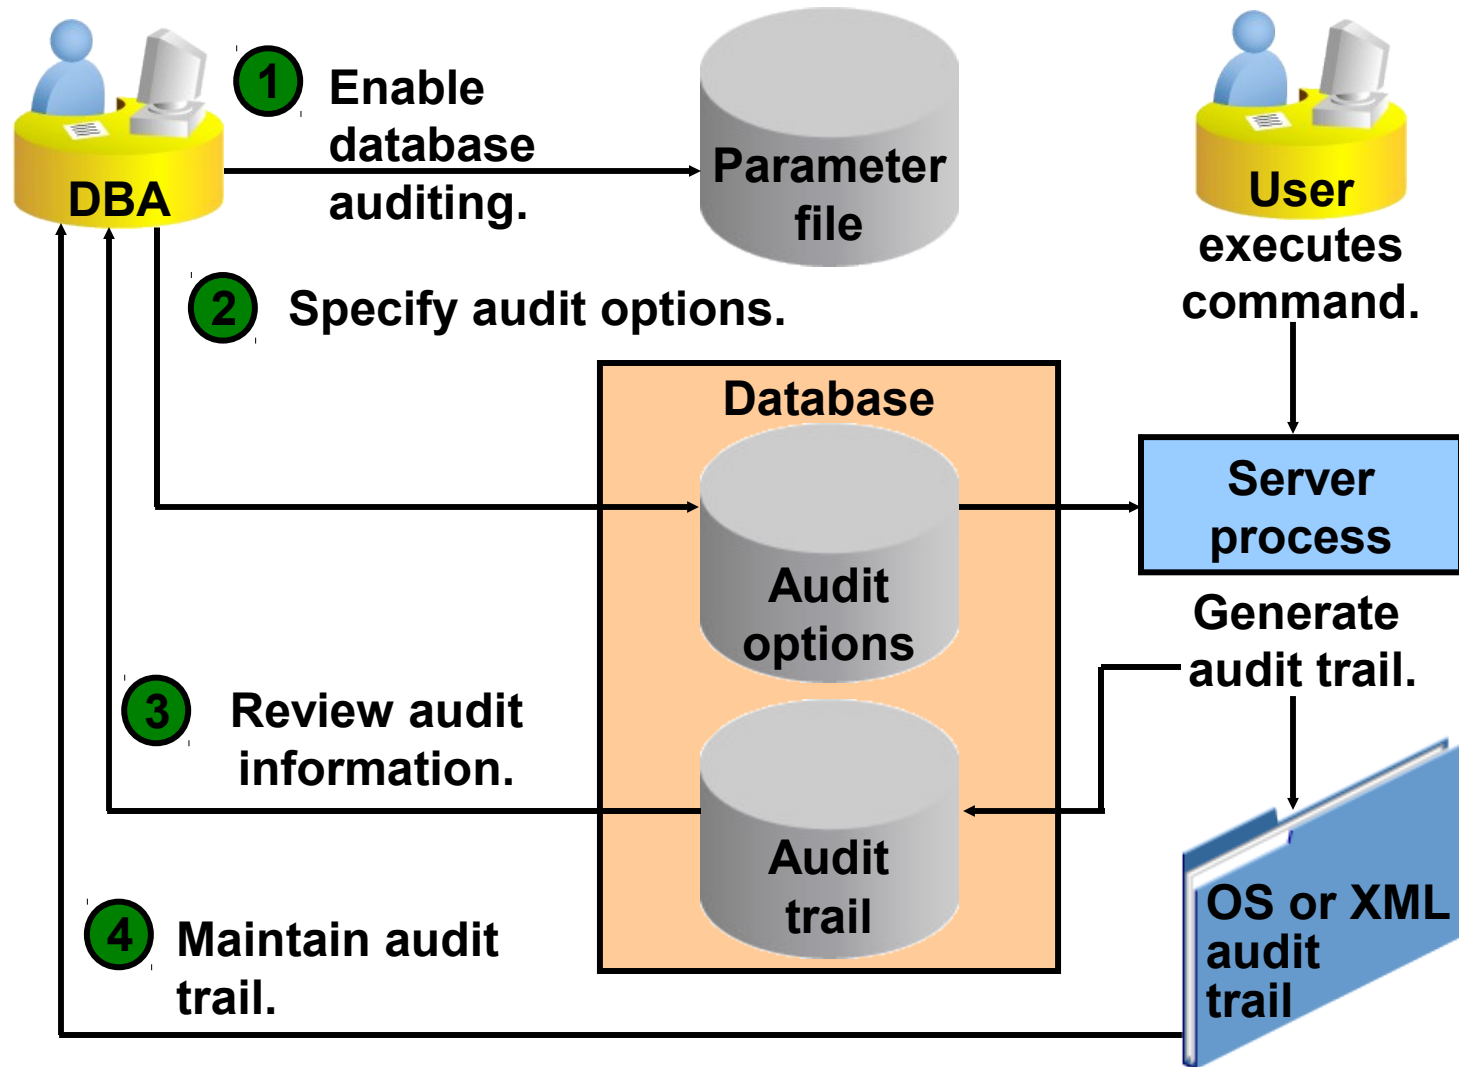

ORACLE

Monitoring for Compliance

Monitoring or auditing must be an integral part of your security procedures.

Review the following:

- Mandatory auditing
- Standard database auditing
- Value-based auditing
- Fine-grained auditing (FGA)
- SYSDBA (and SYSOPER) auditing

ORACLE

Standard Database Auditing

1 Enable database auditing. → Parameter file

User executes command.

2 Specify audit options.

Database

Audit options

Server process

Generate audit trail.

3 Review audit information.

Audit trail

4 Maintain audit trail.

OS or XML audit trail

Configuring the Audit Trail

Use `AUDIT_TRAIL` to enable database auditing.

Database Instance: orcl.oracle.com >

Logged in As SYS

Initialization Parameters

Current   **SPFile**

The parameter values listed here are from the SPFILE **+DATA/orcl/spfileorcl.ora**

Name
audit
Filter on a name or partial name

Basic   Dynamic Category
All ▼   All ▼   All   ▼ (Go)

Audit trail can be set to:
- NONE
- OS
- DB
- DB, EXTENDED
- XML
- XML, EXTENDED

☐ Apply changes in SPFile mode to the current running instance(s). For static parameters, ̵ ̵ ̵ ̵ restart the database.

(Reset)

Select	Name △	Help	Revisions	Value	̵ ̵ents	Type	Basic	Dynamic	Category
⦿	audit_file_dest	ⓘ		)1/app/oracle/admin/orcl/adu ◄		String		✔	Security and Auditing
○	audit_sys_operations	ⓘ		Unspecified ▼		Boolean			Security and Auditing
○	audit_syslog_level					String			Miscellaneous
○	audit_trail	ⓘ		XML		String			Security and Auditing

```
ALTER SYSTEM SET AUDIT_TRAIL='XML' SCOPE=SPFILE;
```

Restart database after modifying this static initialization parameter.

ORACLE

SCN, SQL_BIND, SQL_TEXT
```

```
DBA_COMMON_AUDIT_TRAIL
```

ORACLE
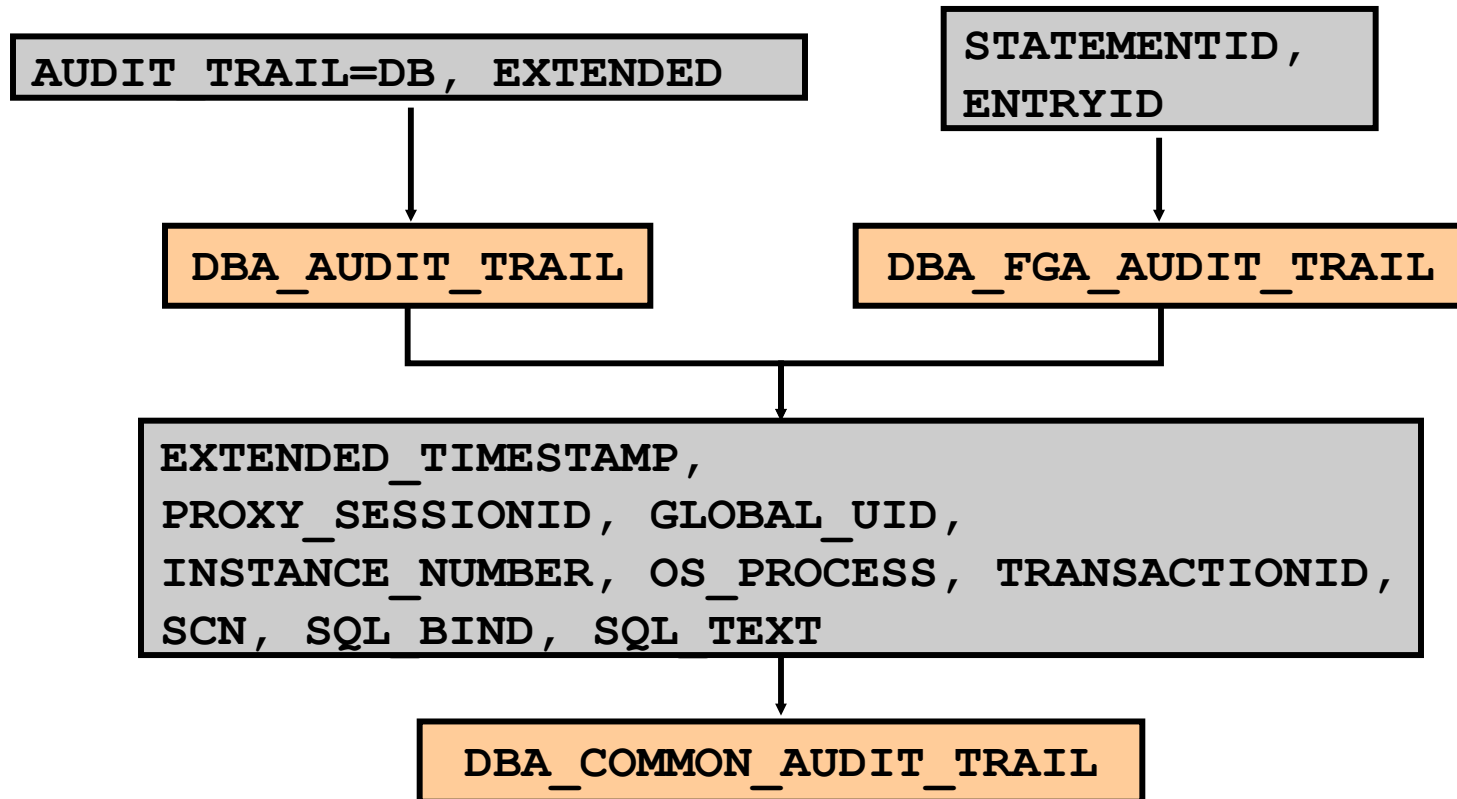

Specifying Audit Options

- SQL statement auditing:

```
AUDIT table;
```

- System-privilege auditing (nonfocused and focused):

```
AUDIT select any table, create any trigger;
AUDIT select any table BY hr BY SESSION;
```

- Object-privilege auditing (nonfocused and focused):

```
AUDIT ALL on hr.employees;
AUDIT UPDATE,DELETE on hr.employees BY ACCESS;
```

ORACLE

Default Auditing

Privileges Audited by Default

ALTER ANY PROCEDURE	CREATE ANY LIBRARY	GRANT ANY PRIVILEGE
ALTER ANY TABLE	CREATE ANY PROCEDURE	GRANT ANY ROLE
ALTER DATABASE	CREATE ANY TABLE	DROP ANY PROCEDURE
ALTER PROFILE	CREATE EXTERNAL JOB	DROP ANY TABLE
ALTER SYSTEM	CREATE PUBLIC DATABASE LINK	DROP PROFILE
ALTER USER	CREATE SESSION	DROP USER
AUDIT SYSTEM	CREATE USER	EXEMPT ACCESS POLICY
CREATE ANY JOB	GRANT ANY OBJECT PRIVILEGE	

Statements Audited by Default

```
SYSTEM AUDIT BY ACCESS
ROLE BY ACCESS
```

Profiles
Audit Settings
Transparent Data Encryption

Audit Settings

Audit information can be located in the database or in an OS file. Some information is always written to the OS audit file. Other information can optionally be written to either the OS audit file or to the database.

Configuration

Audit Trail	DB
Audit SYS User Operations	FALSE
Audit File Directory	/u01/app/oracle/admin/orcl/adump
	Audit File Directory value is effective only when Audit Trail is set to "OS" or "XML".

Default Options For Future Audited Objects 0

Audit Trails

Database Audit Trail	Audited Failed Logins

▼ Hide SQL

SELECT "OWNER", "OBJ_NAME", "USERNAME", "ACTION_NAME", "TIMESTAMP" FROM "SYS"."DBA_AUDIT_OBJECT"
ORDER BY extended_timestamp desc

◎ Previous 25 26-34 of 34 ▼ Next ◎

Schema	Object Name	User Name	Action	Time
INVENTORY	PRODUCT_MASTER	DBA1	ALTER TABLE	2008-08-13 22:47:56.0
INVENTORY	PRODUCT_ON_HAND	DBA1	CREATE TABLE	2008-08-13 16:45:49.0

Disable audit options if you are not using them.

Confirmation

Are you sure you want to remove the 4 selected audited objects?

The audited statements you remove will no longer be audited on the objects.

▼ Hide SQL

```
NOAUDIT COMMENT ON HR.EMPLOYEES
NOAUDIT INDEX ON HR.EMPLOYEES
NOAUDIT LOCK ON HR.EMPLOYEES
NOAUDIT RENAME ON HR.EMPLOYEES
```
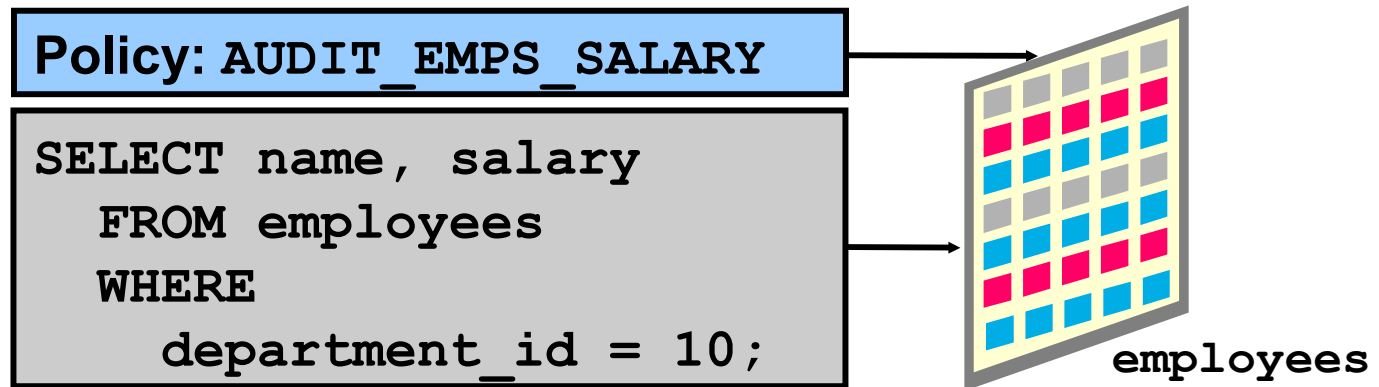

No   Yes

ORACLE

Value-Based Auditing

A user makes a change.

The trigger fires.

Audit record is created by the trigger.

User's change is made.

Audit record is inserted into an audit trail table.
Fine-Grained Auditing

- Monitors data access on the basis of content
- Audits `SELECT`, `INSERT`, `UPDATE`, `DELETE`, and `MERGE`
- Can be linked to one or more columns in a table or view
- May execute a procedure
- Is administered with the `DBMS_FGA` package

Policy: AUDIT_EMPS_SALARY

```
SELECT name, salary
  FROM employees
  WHERE
    department_id = 10;
```

employees

ORACLE

FGA Policy

- Defines:
  - Audit criteria
  - Audit action
- Is created with `DBMS_FGA .ADD_POLICY`

```
dbms_fga.add_policy (
 object_schema   =>  'HR',
 object_name     =>  'EMPLOYEES',
 policy_name => 'audit_emps_salary',
 audit_condition=>  'department_id=10',
 audit_column    =>  'SALARY,COMMISSION_PCT',
 handler_schema  =>  'secure',
 handler_module  =>  'log_emps_salary',
 enable          =>  TRUE,
 statement_types =>  'SELECT,UPDATE');
```

```
SELECT name, job_id
  FROM employees
  WHERE
    department_id = 20;
```
✗

```
SELECT name, salary
  FROM employees
  WHERE
    department_id = 10;
```
✓

✗ Not audited

SECURE.LOG_ EMPS_SALARY

employees

ORACLE

Audited DML Statement: Considerations

- Records are audited if the FGA predicate is satisfied and the relevant columns are referenced.

- `DELETE` statements are audited regardless of columns specified.

- `MERGE` statements are audited with the underlying `INSERT`, `UPDATE`, and `DELETE` generated statements.

Not audited because none of the records involved are for department 10.

```
UPDATE hr.employees
SET salary = 1000
WHERE commission_pct = .2;
```

```
UPDATE hr.employees
SET salary = 1000
WHERE employee_id = 200;
```

ORACLE

FGA Guidelines

- To audit all rows, use a `null` audit condition.
- To audit all columns, use a `null` audit column.
- Policy names must be unique.
- The audited table or view must already exist when you create the policy.
- If the audit condition syntax is invalid, an `ORA-28112` error is raised when the audited object is accessed.
- If the audited column does not exist in the table, no rows are audited.
- If the event handler does not exist, no error is returned and the audit record is still created.

ORACLE

`SYSDBA` Auditing

Users with `SYSDBA` or `SYSOPER` privileges can connect when the database is closed.

- Audit trail must be stored outside the database.
- Connections as `SYSDBA` or `SYSOPER` are always audited.
- You can enable additional auditing of `SYSDBA` or `SYSOPER` actions with `AUDIT_SYS_OPERATIONS`.
- You can control the audit trail with `AUDIT_FILE_DEST`.

ORACLE

Maintaining the Audit Trail

The audit trail should be maintained with the following best-practice guidelines:

- Review and store old records.

- Prevent storage problems.

- Avoid loss of records.
ORACLE

Oracle Audit Vault

- Consolidate and secure audit data
    - Oracle 9i Release 2 and higher
    - SQL Server 2000, 2005
    - IBM DB2 UDB 8.5 & 9.2
    - Sybase ASE 12.5 - 15.0
    - Secure and scalable
    - Cleanup of source Oracle audit data
- Centralized reporting
    - Updated reports interface using widely popular Oracle Application Express
    - Standard reports for compliance
    - New custom reports
- Alert on security threats
    - Detect and alert on security relevant events

Oracle Database

Microsoft SQL Server

IBM DB2

Sybase ASE

ORACLE
Quiz

Standard database auditing captures the before and after changes of a DML transaction.

1. True
2. False

ORACLE

Quiz

Auditing of `SYSDBA` and `SYSOPER` actions is enabled by default.

1. True
2. False

ORACLE

Summary

In this lesson, you should have learned how to:

- Describe DBA responsibilities for security and auditing
- Enable standard database auditing
- Specify audit options
- Review audit information
- Maintain the audit trail

ORACLE

Practice 11 Overview: Implementing Oracle Database Security

This practice covers the following topics:

- Enabling standard database auditing
- Specifying audit options for the HR.JOBS table
- Updating the table
- Reviewing audit information
- Maintaining the audit trail

ORACLE
